Orders priced at this rate for Vegetable Seeds, Peas, Beans, Sweet Corn, Lawn Grass, Grass Seeds and such heavy and unmailable goods as Field Corn, Roots, Seed Potatoes, Insecticides and Fertilizers will be shipped by Truck, Freight or Express, charges to be collected from the customer. If this class of goods must be shipped by parcel post please include postage with order.

TERMS OF SALE. Our regular terms are CASH WITH ORDER. Remittance by Bank Check, Post Office or Express Money Order is safest. Register letters containing money. Clean unused postage stamps are acceptable for amounts less than \$1.00. Please do not ask for C.O.D. shipment unless you enclose 25% of the amount of the order.

We carefully test all seeds for germination and mark each package in accordance with Connecticut and United States seed laws. However, in conformity with all responsible seedsmen, Comstock, Ferre & Co. give no warranty, express or implied, as to productiveness of any seeds or bulbs we sell and we will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed.

SPECIAL QUOTATIONS. Prices, particularly of Field Seeds, depend upon market conditions and are subject to change without notice. We will quote large quantities at prices as low as the highest quality of seed will permit. Let us quote you current prices on Grass and Field Seeds, Seed Potatoes and Onion Sets.

SEED TREATMENT. While we do not recommend the indiscriminate treatment of seeds with fungicides it is well known that certain seeds often show an increased germination or healthier seedlings when properly treated. The most approved materials are Semesan products, Spergon, Red Copper Oxide and Zinc Oxide used as a dust upon seed before sowing. It is very important that the right material be used upon each kind of seed.

We recommend that our customers use these materials only with the most recent instructions of manufacturers and Experiment Station authorities. Upon request we can furnish seed on bulk orders treated as required at a slight advance in price, but we do not guarantee or hold ourselves responsible for results.

MAIL ORDERS. In the shipping season we endeavor to give prompt service on orders, and give special attention to seeds needed for immediate planting. During the rush season some delay is inevitable as we are called upon to supply an ever increasing number of orders in spite of being hampered by uncertain and slow delivery of our seed supplies. Early orders are advisable, particularly for seed to be sown in greenhouses and cold frames for growing early plants. Very early orders for general garden planting may have to be held for economical handling until crops of seed are received and packaged.

There are some varieties of seed which have not produced normal crops this season. If our supplies are exhausted we will fill orders with a similar or equally useful variety unless we are requested to the contrary.

BEFORE MAILING YOUR ORDER Write your name, address and shipping point in full and plainly on the order sheet. Be sure to give nearest freight or express station if different from your post office address.

We will gladly send copies of this catalogue to any of your friends who may be interested.

VEGETABLES FOR VICTORY

The phenomenal success of the Victory Garden Campaign in 1943 portends even greater efforts in 1944. Experienced gardeners enlarged their gardens and many new planters learned by trial how to succeed in gardening. Home vegetable gardening and home canning have proved a healthful and profitable contribution to the war effort by millions of gardeners. As the supply of farm labor decreases the need for more and more home grown food increases.

By careful planning even the smaller gardens can be made to produce an amazing amount of food. Planting for a succession of crops is most important. Except for canning, relatively large amounts of any one vegetable are not needed at any one time. A succession of small plantings, particularly of the quick maturing kinds, will give a continuous yield of tender fresh vegetables all through the season. We believe there will be enough seed for planting, but we recommend that care be used to purchase no more seed than can reasonably be used.

CARROT, TENDERSWEET The brightest colored and sweetest of all carrots. For main crop deep reddish orange roots are most attractive. The roots are 8 to 10 inches long, coreless, and taper to a blunt point.

Pkt. 10c; oz. 50c; 1/4 lb. \$1.40; lb. \$4.50

CELERY, SUMMER PASCAL Superb early maturing strain of Giant Pascal. Large round stalks, solid and brittle, without strings and of finest flavor.

Pkt. 15c; oz. \$1.20; 1/4 lb. \$4.00; lb. \$14.00

LETTUCE, OAKLEAF An increasingly popular and unique garden lettuce. Numerous light green deeply cut leaves are gathered into compact rosettes so that the leaves are partially blanched. A tender and delicious sort worth trying.

Pkt. 10c; oz. 25c; 1/4 lb. 75c

MUSKMELON, SCHOON'S HARD SHELL A superb new late melon, nearly round, and weighing 5 to 7 lbs. The skin is coarsely netted, gray-green in color becoming yellow when ripe. The flesh is exceptionally thick and fine flavored. The thin hard shell makes this a good market melon.

Pkt. 15c; oz. 35c; 1/4 lb. \$1.05; lb. \$3.50

SQUASH, BUTTERNUT A new strain with many desirable qualities long sought for in squash. Its fine dry texture and mild sweet flavor make it a favorite wherever grown. The 10 to 12 inch fruits are cylindrical with a rounded knob at the end, each squash being enough to serve 5 to 6 people. The thin rind is buff colored enclosing solid dark orange flesh throughout the squash except for a small seed cavity in the rounded end.

LAWN GRASS MIXTURES

Fine lawns can be grown only from clean, high germinating seed. Our mixtures are carefully planned for permanent velvety lawns with average soil and care. Each mixture is adapted to a particular type of use or soil condition, and composed of highly re-cleaned seed containing a negligible amount of weed seeds and waste. The number of seeds of the basic lawn grasses is so great that for each 400 sq. ft. only one pound of seed is needed. Even a less quantity of the higher priced mixtures will give excellent results if carefully sown and well fertilized.

SUPERFINE MIXTURE (Conn. Gold Seal)* Recommended for reseeded old turf and new seeding where careful preparation and extra care will be taken. Composed of the very highest quality Kentucky Blue Grass, Chewings Fescue, Astoria Bent and Red Top, without Clover, in proper proportion to make the finest velvety turf.

Lb. 65; 2 lbs. \$1.25; 5 lbs. \$3.00;
15 lbs. \$8.55; 100 lbs. \$55.00

FINE LAWN MIXTURE (Conn. Blue Seal)* Our most popular high grade mixture, best for general use. Composed of the same grasses as our Superfine Mixture with the addition of White Dutch Clover and Domestic Rye Grass. Grows quickly and produces a really fine dark green permanent lawn.

Lb. 60c; 2 lbs. \$1.15; 5 lbs. \$2.75;
15 lbs. \$7.80; 100 lbs. \$50.00

GREEN TURF MIXTURE (Conn. Red Seal)* A mixture of good quality at a moderate price. Contains all of the grasses in the higher priced mixtures, but in different proportion. May be planted with confidence that an excellent lawn will result.

Lb. 50c; 2 lbs. 95c; 5 lbs. \$2.25;
15 lbs. \$6.30; 100 lbs. \$40.00

WHITE DUTCH CLOVER (Creeping Variety) Valuable for lawns, especially on sunny banks and light poor soil. Helps combat crab grass.

1/4 lb. 40c; lb. \$1.10

*Approved by the Connecticut State Department of Agriculture for varieties of grasses, purity and germination. Our mixtures exceed the standards by containing a larger percentage and greater variety of high priced fine-leaved grasses with less weeds and inert matter.

Grass varieties are listed on page 43. We will be glad to advise you as to special mixtures for unusual conditions. Lawn Grass Mixtures at 100 lb. price are not prepaid. 25 lbs. of any mixture at the 100 lb. rate.

CAULIFLOWER

Cauliflower is easily grown if properly cared for, although to be a profitable market crop it is somewhat particular as to soil and location. For the early crop it should be planted in a greenhouse or hot bed in March and transplanted as soon as weather will permit. Sow in May and transplant 18 inches apart in rows 3 feet apart for the late crop. Cultivate thoroughly and frequently to keep plants in good growing condition. When heads begin to form it may be necessary to bunch the leaves together and tie loosely to protect them from the sun.

The superior imported strains of Cauliflower which we have supplied for many years are now nearly exhausted. American grown strains are still somewhat of an experiment, but we believe we have selected only such strains as will compare favorably with our usual quality.

CELERY

For both market and home use there is no more highly esteemed vegetable than Celery. As the seed is small it requires careful planting. Sow in drills one-fourth inch deep in early spring. The soil should be well pulverized and the seed lightly covered with soil pressed firmly over it. Additional sowings may be made but usually the early plantings germinate best. Transplant in rows 3 feet apart, leaving 3 to 4 inches between plants, or for extra large stalks 6 to 8 inches. Keep well cultivated and as cool weather approaches draw the soil up around the plants. Continue until only the tops of the plants remain uncovered. Blanching of early Celery is often accomplished with boards or building paper set against the rows instead of soil. Late Celery should be pitted or placed in cellars before freezing weather.

SWEET CORN Standard Varieties

Sweet Corn is tender and will not stand frost nor will it germinate well in wet cold soils. It responds to good soil and clean, frequent cultivation. Plant in well-fertilized hills 3 feet apart each way, putting 5 or 6 kernels in each hill and covering to a depth of not more than 1½ inches. When 6 inches high remove all but three most vigorous stalks from each hill. For a succession throughout the season plant several varieties early in May, including first early to late. A good second early variety planted at intervals of two weeks until the middle of July will produce a continuous supply. Treatment with Semesan Jr. is very effective in insuring the germination of early planted corn and controlling seed borne disease. For prices see page 46.

Some scarce varieties are at ceiling prices, but many other varieties are well below the prices which could lawfully be charged. Should our supplies become exhausted it may be necessary to advance prices on these items. Government requirements for help to other countries and other foreign demands have so depleted supplies that no seed must be wasted if there is to be enough for all. SPINACH

The most important greens crop. It is very hardy and will stand considerable freezing weather, but many varieties run to seed rapidly in hot weather. It is of easy culture and by successional sowing a supply may be secured throughout the season. For early spring use sow late in September and protect with hay or straw through the winter. May be sown in spring as early as the ground can be worked, either in rows or broadcast. Summer sowings should be on freshly plowed ground and the soil must be packed hard about the seed, as it will not germinate in dry soil. Treatment of seed with Red Copper Oxide is recommended especially for summer planting or on land where Spinach is subject to "damping off."

The seed is very hard-shelled and should be soaked in warm water several hours before planting.

SQUASH

Warm and highly manured soil is required for the most successful culture of Squash. The summer kinds, nearly all of which are bush growth, should be planted in hills 4 feet apart each way, while the winter and other running varieties require 8 to 10 feet. When thinning, leave only 3 or 4 plants to a hill. Dusting with Rotenone dust is effective to control the Striped Cucumber Beetle.

TOMATO

To furnish desirable early plants the seed should be sown in February or March in a hotbed or box kept in a warm place. When the plants are about 2 inches high they should be thinned or transplanted to ensure stocky plants. As soon as danger from frost is past transplant to the open ground, setting about 3 feet apart each way. They should be frequently cultivated and well-fertilized. The fruit will ripen earlier and be improved in quality if the vines are pruned to two stems and trained to stakes or trellises. Plants for late summer crop may be started from seed in May.

ANNUALS

Flowers That Bloom the First Year From Seed

The best of success with many annuals may be had by sowing them in beds where they are to flower. The hardier varieties such as Calendula, Larkspur, Centaurea and Poppy may be sown very early, while the more tender, as Balsam, Nasturtium, Marigold and Zinnia, are best planted later when the ground has become warm. Prepare the soil carefully, making it soft and fine, and sow the seed broadcast or in rows. When large enough, thin the seedlings so that they stand about half as far apart as their maximum height. If a hotbed or coldframe is available many kinds may be started earlier and transplanted, hastening the blooming period. Perennials listed on page 38.

BIENNIALS AND PERENNIALS

Biennials bloom at their best, for one season only, from seed sown the previous year.

A bed or coldframe where some protection from the sun can be given is best. Some kinds flower the first season and will be found listed as annuals.

FERTILIZERS

VICTORY GARDEN FERTILIZER 5-10-5 This season we are permitted to offer a much stronger mixed fertilizer for gardens. This is comparable in strength to pre-war formulae and should give excellent results. When preparing the garden 4 lbs. may be broadcast on each 100 sq. ft. and well raked in. Other applications may be made later beside growing leafy crops. When used in hills or drills the fertilizer should be well mixed with the soil so that the seed does not come into direct contact with the fertilizer.

5 lbs. 50c; 10 lbs. 80c; 25 lbs. \$1.45;
50 lbs. \$2.35; 100 lbs. \$3.70

DRICONURE A clean, dry, pulverized form of cattle manure, poultry manure and peat moss, containing all of the elements needed for a complete fertilizer and soil conditioner. It is free from weed seeds, practically odorless and easy to use. An ideal top dressing and soil improver for lawns and gardens.

7½ lbs. 55c; 50 lbs. \$2.00

BONE MEAL An excellent fertilizer for general use. Used as a top-dressing for lawns, the feeding rootlets assimilate bone meal slowly as it disintegrates over a long period, keeping the lawn in good condition all through the season. Because of its long-lasting qualities, bone meal is very desirable for fertilizing all hard wooded plants, including roses, flowering shrubs, fruit bushes, and trees. A liberal application mixed into the soil when planting bulbs or perennial plants will result in remarkable size and brilliancy of flowers. Use 25 to 50 lbs. per 1000 sq. ft.

Supply doubtful

SUPERPHOSPHATE Contains 20% Phosphoric Acid. Valuable for supplementing other fertilizers. Used to increase earliness, quality and firmness of growth of vegetables, fruit and flowers. Also an economical fertilizer for pastures and grass land.

100 lbs. \$1.00; 500 lbs. \$3.50

GRANULATED PEAT MOSS

The increasing use of Peat Moss for gardens shows a better understanding of its value. It is a vegetable product which remains in the soil for many years contributing to the formation of humus, making the soil more porous, and improving its general texture and condition. It contributes effective drainage and is a reservoir for storing moisture and air, thereby favoring plant growth. Also used for mulching perennial and rose beds, as well as around evergreens, retaining the moisture so necessary to their growth.
